Отчёт по реализации мониторинга

Шаг 1. Создание пользователя, добавление в группу

команды последовательно

sudo adduser ivan - создать пользователя

sudo groupadd monitoring - создание группы

sudo usermod -aG monitoring ivan - добавление в группу без удаления из других(-aG)

groups ivan - посмотреть список групп пользователя

```
ubuntu@fhm51oufg1g9o0uck4hp:~$ groups ivan
ivan : ivan users monitoring
ubuntu@fhm51oufg1g9o0uck4hp:~$ su ivan
Password:
ivan@fhm51oufg1g9o0uck4hp:/home/ubuntu$
```

Шаг 2. Создание папки, полный доступ для группы и юзера, остальные - только чтение

команды последовательно

cd - переход в хоум папку юзера

mkdir monitoring - создать папку

chmod 0-x monitoring - задать права на others

ls -la - проверить

cd monitoring - перейти в папку

nano monitoring.log - создать файл для записи логов

o

```

```

Шаг 3. Обновление и установка пакетов, с установкой nginx

команды последовательно

exit - выход из пользователя

sudo apt update - обновить информацию о пакетах приложений

sudo apt upgrade - обновить пакеты

sudo apt install nginx - установить

sudo systemctl start nginx - запустить

sudo systemctl status nginx - проверить состояние

Практикум

```
ivan@fhm51oufg1g9o0uck4hp:~/monitoring$ exit
exit
ubuntu@fhm51oufg1g9o0uck4hp:~$ sudo systemctl status nginx
Warning: The unit file, source configuration file or drop-ins of nginx.service changed on disk. Run 'systemctl daemon-reload' to reload units.

Шаг 4. Запуск стресс

команды последовательно

stress - справка

stress --cpu 8 --io 4 --vm 2 --vm-bytes 128M --timeout 10s - выбор запуска предложенного

```
ubuntu@fhm51oufg1g9o0uck4hp:~$ stress
`stress' imposes certain types of compute stress on your system

Usage: stress [OPTION [ARG]] ...
 -?, --help         show this help statement
     --version      show version statement
 -v, --verbose      be verbose
 -q, --quiet        be quiet
 -n, --dry-run      show what would have been done
 -t, --timeout N    timeout after N seconds
     --backoff N    wait factor of N microseconds before work starts
 -c, --cpu N        spawn N workers spinning on sqrt()
 -i, --io N         spawn N workers spinning on sync()
 -m, --vm N         spawn N workers spinning on malloc()/free()
     --vm-bytes B   malloc B bytes per vm worker (default is 256MB)
     --vm-stride B  touch a byte every B bytes (default is 4096)
     --vm-hang N    sleep N secs before free (default none, 0 is inf)
     --vm-keep      redirty memory instead of freeing and reallocating
 -d, --hdd N        spawn N workers spinning on write()/unlink()
     --hdd-bytes B  write B bytes per hdd worker (default is 1GB)

Example: stress --cpu 8 --io 4 --vm 2 --vm-bytes 128M --timeout 10s

Note: Numbers may be suffixed with s,m,h,d,y (time) or B,K,M,G (size).
ubuntu@fhm51oufg1g9o0uck4hp:~$ stress --cpu 8 --io 4 --vm 2 --vm-bytes 128M --timeout 10s
stress: info: [49043] dispatching hogs: 8 cpu, 4 io, 2 vm, 0 hdd
stress: info: [49043] successful run completed in 10s
ubuntu@fhm51oufg1g9o0uck4hp:~$
```

Шаг 5. Поиск нужной инфы

команды последовательно

ps aux - смотрим процессы

ps aux | grep stress - выделить стрес

Практикум

ps aux | grep nginx - выделить нджинкс

ps aux | grep -E "(nginx|stress)" - обьединили

ps aux | grep -E "(nginx|stress)" | awk '{print "Time "$9,$11,"CPU:",$3"MB","RAM:",$4"%"}' - вывод нужного текста с помощью AWK

ps aux | grep -E "(nginx|stress)" | awk '{print "Time "$9,$11,"CPU:",$3"MB","RAM:",$4"%"}' > monitoring.log - отправить результаты в лог файл

nano monitoring.log - смотрим

Практикум

```

Шаг 6. записать файл SH и планировищ CRON

команды последовательно

#!/bin/bash

ps aux | grep -E "(nginx|stress)" | awk '{print "Time "$9,$11,"CPU:",$3"MB","RAM:",$4"%"}' > /home/ivan/monitoring/monitoring.log

скрипт готов

crontab -e - запуск планировщика

* * * * * sh /home/ivan/monitoring/monitoring.sh - расписание

cat monitoring.log - проверяем

# Edit this file to introduce tasks to be run by cron.
#
# Each task to run has to be defined through a single line
# indicating with different fields when the task will be run
# and what command to run for the task
#
# To define the time you can provide concrete values for
# minute (m), hour (h), day of month (dom), month (mon),
# and day of week (dow) or use '*' in these fields (for 'any').
#
# Notice that tasks will be started based on the cron's system
# daemon's notion of time and timezones.
#
# Output of the crontab jobs (including errors) is sent through
# email to the user the crontab file belongs to (unless redirected).
#
# For example, you can run a backup of all your user accounts
# at 5 a.m every week with:
# 0 5 * * 1 tar -zcf /var/backups/home.tgz /home/
#
# For more information see the manual pages of crontab(5) and cron(8)
#
# m h  dom mon dow   command
* * * * * sh /home/ivan/monitoring/monitoring.sh
